A MESSAGE FROM THE ADMINISTRATOR

Dear Residents of Vermilion County,

This Annual Report highlights the work of our dedicated staff and committed Board of Health members during 2012. The economic challenges facing communities throughout the state punctuate the need for continued efforts to use our scarce resources to effectively protect and promote the health of Vermilion County residents. Every effort has been made to extend the reach of public health by expanding our partnerships with other Vermilion County agencies and strategically renewing our purpose and focus as we are challenged with meeting the changing needs of our citizens. I encourage you to also visit our website at www.vchd.org for more information about your health department.

Sincerely,

Shirley Hicks, CPHA
Public Health Administrator

ANNUAL PROGRAM SYNOPSIS HIGHLIGHTS AND SERVICE STATISTICS

Our 2012 – 2017 IPLAN Community Needs Assessment and Community Health Plan were approved by the Illinois Department of Public Health and consequently, we are designated to be the “local health authority” and empowered to enforce state regulations.

Administrative and Organizational Support

The administrative division is responsible and accountable for the overall operation and management of the Vermilion County Health Department and all of its programs and services. The responsibilities of the administrative division include budget preparation, fiscal management, grant application, program priorities, policies and procedures, as well as, supervising all personnel, program activities and record maintenance.

The completion of a comprehensive Community Needs Assessment and the development of the Community Health Plan for 2012-2017 was a monumental accomplishment for the Vermilion County Health Department in 2012 that was a collaborative effort of over 40 individuals representing a variety of agencies and organizations from across the county culminating in the recertification of the Vermilion County Health Department for the next five years.

Vital Records

As the Local Registrar, the Vermilion County Health Department must oversee the activities of several deputy registrars. The Vermilion County Health Department is also authorized to provide certified copies of birth and death certificates, which are recorded and filed at the Vermilion County Health Department.

The Vermilion County Health Department has birth and death certificates which were recorded and filed after January 1, 1983. Certified copies for birth and death certificates, recorded prior to January 1, 1983, may be obtained from the County Clerk’s Office at the Vermilion County Courthouse Annex.

<u>Vital Records Service Statistics:</u>	<u>2012</u>
Death certificates recorded and filed:	824
Certified copies provided upon request:	6,083
Birth certificates recorded and filed:	675
Certified copies provided upon request:	<u>222</u>
Total Services	7,804

Total fees generated for certified copies:	\$47,207
Filing fees authorized by IDPH @ \$1 each:	<u>\$ 1,298</u>
Total Fees	\$48,505

Total IL EDC Surcharge fees remitted to State \$16,218

Women, Infants and Children (WIC)

The WIC program provides specific nutritious supplemental foods for pregnant or breastfeeding women, infants and children up to five years of age. Each WIC participant's eligibility is determined by income and medical/nutritional risk identified through screenings during clinic appointments. Program policy requires each participant be offered at least one nutrition education class during each six-month certification period. As of July 1, 2012, children are certified for a period of one year and infants are certified to their first birthday. Mothers of infants certified to the first birthday are scheduled to attend two nutrition education classes, and to bring the infant to the clinic for follow-up medical/nutritional assessments. The supplemental foods are prescribed for each client based on specific risks found through clinic screenings. Infant foods provided are: iron-fortified infant formula, infant cereal and baby fruits and vegetables. Supplemental foods provided for women and children may include: milk, cheese, juice, eggs, cereal, peanut butter and/or dried peas and beans and fruits and vegetables. There is also a choice of whole wheat bread or brown rice / corn tortillas or oatmeal. Mothers that are exclusively breastfeeding their infants may also receive tuna or salmon in addition to the foods listed above. Infants that are exclusively breastfed get additional baby fruits and vegetables plus baby meats at the appropriate ages.

The caseload assignment for the first six months of 2012 was 3,262 participants per month and for the last six months it was 3,180 participants per month. Achievement of assigned caseload averaged 84% for the calendar year.

The WIC program is funded by the United States Department of Agriculture and administered through the Illinois Department of Human Services.

<u>WIC Service Statistics:</u>	<u>2012</u>
Medical Assessments	5,997
Nutritional Assessments	5,997
Subsequent counseling/follow-up assessments	6,804

Local Economic Impact of WIC

Average food package cost: **\$66.00** per month per participant. Estimated food dollars spent in Vermilion County annually: **\$2,132,064** (based on food packages distributed).

Communicable Disease Control and Immunization Program

The goal of this program is to control communicable diseases preventable by immunization and other available public health interventions. This control program involves surveillance over the incidence of communicable disease and the implementation of all practical, safe and effective methods of disease prevention, whether applicable to the source environment or host.

Diseases Reported:

	<u>2012</u>
Animal bites reported to the VCHD by the Vermilion County Department of Animal Regulation (VCDAR)	33
Rabies prophylaxis persons receiving treatment	9
Total Animal bites reported to the VCDAR:	161

Miscellaneous: (Reports not required)	400

*Diseases which are commonly food or waterborne through fecal/oral route of infection.

<u>Communicable Disease Control Summary:</u>	<u>2012</u>
Total illnesses reported to the VCHD and forwarded to the Illinois Dept. of Public Health:	765
Total investigation/case documentation	<u>400</u>
Total Services	1,165

Immunizations

The Vermilion County Health Department's Immunization program consists of regularly scheduled clinics designed primarily to provide required childhood immunizations on a large scale to preschool and school age children in Vermilion County. The Vermilion County Health Department provided immunizations during 48 regular clinics scheduled throughout the calendar year. We also held 2 publicized walk-in Tdap vaccination clinics for children to provide access for parents to meet the new requirement of Tdap for 6th and 9th graders. The program also provided vaccines on a walk-in basis on 4 additional days to meet the requirement prior to school registration. A copy of the annual immunization clinic schedule is available on the VCHD web page, www.vchd.org, or by request.

Requests received for International Travel Vaccination requirements in 2012: 0

Environmental Health Division

Environmental Health is one of the major components of public health. The Environmental Health Division deals with all of the factors in man's physical environment, which may have a detrimental effect upon him.

The Illinois Department of Public Health Standards for Local Health Departments in Illinois requires three basic environmental health programs.

These programs are:

- Food Sanitation
- Potable Water Supplies
- Private Sewage Disposal

The Vermilion County Health Department provides approved programs in all three program areas, and six other recommended programs: vector prevention/pest control, housing, solid waste, nuisance control, lead poisoning prevention, and enforcement of the Smoke Free Illinois Act.

Food Service Sanitation

The primary objective of the food service sanitation program is the protection of the consumer by assuring that food and food products, provided by food service establishments and retail food stores, are protected against contamination by infectious agents or adulteration by toxic materials.

The Vermilion County Health Department's **Ordinance Governing Food Service Sanitation** requires the issuance of permits to operate food service establishments and requires the Vermilion County Health Department staff to carry out inspections of food service establishments, retail food stores and temporary food service establishments. The staff is also part of the investigation team for all foodborne illness outbreaks in Vermilion County. The ordinance currently covers all areas of Vermilion County.

Types and Number of Food Service Establishment Permits Issued

	<u>2012</u>
Catering services	12
Institutions	16
Taverns without food service	34
Restaurants and taverns with food services	192
Retail food stores and delicatessens	134
Schools	62
Mobile Units	7
Temporary food service establishments	<u>508</u>
Totals	965

Food Service Sanitation Activities

	<u>2012</u>
Field investigations	94
Compliance inspections	1,240
Food samples collected	2
Food service permits issued	965
Adulterated food and foodborne illness complaints	5
Office, field and telephone Conferences	6,601
Official Correspondence	<u>2,499</u>
Totals	11,406

In 1995, the Illinois Food Service Sanitation Code was revised to allow local health departments to utilize a Hazard Analysis Critical Control Point (HACCP) process to classify food service establishments and modify the number of inspections required for each establishment. Prior to the implementation of HACCP, each establishment was required to be inspected at least once every six months. Under the HACCP system, all food service establishments are classified into one of three different risk categories: Class I (High Risk), Class II (Moderate Risk), Class III (Low Risk). Each establishment is analyzed and categorized on the basis of operation, volume of meals, population served, preparation steps and the amount of hand contact performed during the preparation and/or serving of the food. Our staff started using the HACCP system in 1996. Utilization of the HACCP system allows us to effectively focus on more intensive inspections and education activities on establishments with the greatest potential risk for causing foodborne illness.

HACCP Classifications (12/31/12)	Number of Establishments	Annual Number of Required Inspections
Class I (High Risk)	178/41%	Minimum of 3
Class II (Moderate Risk)	111/25%	Minimum of 1
Class III (Low Risk)	<u>148/34%</u>	Minimum of 1
	437/100%	

Effective on January 1, 2003, all food service establishments in Vermilion County were given a letter grade that corresponded with the score they received on their most recent sanitary inspection. Food service establishments scoring 90 to 100 points on their sanitary inspection are given an “A”. Establishments scoring 80 to 89 points are given a “B” and those scoring 70 to 79 points are given a “C”. Establishments that score less than 70 points are closed until they correct the violations cited. The letter grade is placed on a score form and posted by the food service establishment in a conspicuous place near the food service establishment permit. The consuming public may then observe the posted grade the establishment earned on their latest sanitary inspection and make an informed decision on eating at that establishment.

The information below represents a breakdown of the grades earned by food establishments at the time of their inspection(s) during 2012. This is not an unduplicated count because some establishments require multiple inspections due to their HACCP Classification as identified above

A = 563/89.7%
 B = 62/ 9.8%
 C = 3/ .5%

Potable Water Supplies

The object of this program is to reduce disease transmission and chemical poisons or adulterants through the provision of a safe, potable and adequate supply of water for consumption, culinary and sanitary purposes for every individual in Vermilion County.

The Vermilion County Health Department is achieving this objective in part by enforcing the **Ordinance Governing Potable Water Wells and Water Supplies** in Vermilion

County. The ordinance and an agreement with the Illinois Department of Public Health empower the Vermilion County Health Department to issue permits for the installation of all new water wells. The Illinois Department of Public Health agreement and local ordinance also empower us to inspect the installation of wells and pumps to ensure they meet code requirements, to inspect and collect water samples from non-community water supplies, and to ensure that all abandoned wells are properly sealed.

The Environmental Health staff also collects samples and inspects private water supplies at the request of Vermilion County residents. The water samples are sent to the Illinois Department of Public Health Laboratory in Springfield, Illinois or to the lab at Aqua Illinois Water Company in Danville for analysis. The Environmental Health staff interprets the analysis of the water sample and reports the condition of the water in the sample to the owner of the water supply. If the water in the sample is found to be unacceptable for human consumption, the Environmental Health staff will recommend appropriate corrective action. Of the 416 water supply samples collected in Vermilion County in 2012, 40% were found to be unacceptable for human consumption.

Potable Water Supply Activities

	<u>2012</u>
Private water samples submitted	416
Office, field and telephone conferences	2,910
Well inspections	525
Official correspondence	1,470
Well construction permits issued	63
Abandoned wells: certified as sealed	<u>39</u>
Totals	5,413

Private Sewage Disposal

The objective of this program is to prevent the transmission of disease organisms from the improper or inadequate treatment of sewage by providing that all sewage is discharged to a properly designed, constructed and operating sewage disposal system. This objective is being achieved by enforcing the Vermilion County Health Department's **Ordinance Governing Private Sewage Disposal**. The ordinance authorizes the Environmental Health staff to order corrections of inadequately treated sewage discharges, to issue construction permits for private sewage disposal systems, to design and size private sewage disposal systems, to inspect newly constructed systems prior to being back-filled to ensure they are constructed properly, and to issue licenses to all private sewage disposal contractors and septic tank pumpers.

Private Sewage Disposal Activities

	<u>2012</u>
Construction permits issued	75
Contractor's licenses issued	34
Onsite compliance and enforcement inspections	676
Office, field and telephone conferences	2,985
Official correspondence	<u>3,908</u>
Totals	7,678

Vector Prevention and Pest Control

The goal of this program is to prevent and control the transmission of disease, infestation of structures and other problems associated with insect and rodent infestations. The Environmental Health staff investigates complaints of insect and rodent infestation and orders corrections or recommends corrective measures in situations which may adversely affect public health.

In 2012, the Environmental Health staff was again involved in the collection of dead perching birds such as crows, robins and blue jays. Those birds that were determined to be suitable for testing were submitted to the appropriate laboratory and tested for the presence of West Nile Virus. Three birds were collected and tested for West Nile Virus in 2012, none of which tested positive for the presence of the disease.

Environmental Health staff received grant funds to purchase mosquito traps to collect mosquitoes and to purchase equipment to test the collected mosquitoes for the presence of West Nile Virus. Environmental Health staff set up and maintained traps at ten sites throughout Vermilion County in 2012. None of those sites were found to have mosquitoes infected with West Nile Virus.

Environmental Health staff talked to numerous individuals throughout 2012 concerning West Nile Virus and the control of vectors associated with the disease. Information was sent to units of local government, suggesting ways to obtain grant funds to purchase larvacides for the control of mosquito populations.

Since 2002, there have been five reported human cases of West Nile Virus in Vermilion County – three in 2002, one in 2003 and one in 2006.

Vector Prevention and Pest Control Activities

	<u>2012</u>
Field investigations	253
Office, field, telephone conferences and consultations	176
Official correspondence	<u>130</u>
Totals	559

Housing Program

The goal of this program is to eliminate safety hazards and the transmission of disease through the control of abandoned and structurally damaged buildings. The Vermilion County Health Department does not have a housing ordinance at this time, but the Environmental Health staff enforces sections of the Vermilion County Health Department's Ordinance Governing Solid Waste Disposal that deal with fire damaged or abandoned structures.

The Environmental Health staff, for a fee established by the Vermilion County Board, conducts home loan inspections on request from mortgage companies, state and federal agencies, realtors and individuals buying or selling a home. The home loan inspections are conducted on properties that are in the process of changing ownership and consist of

an inspection of the water supply and private sewage disposal system that services the property. The sanitarian conducting the inspection determines if the water supply is safe and if the sewage disposal system is adequate and functioning properly.

Housing Program Activities

	<u>2012</u>
Home loan inspections	58
Field investigations	2
Office, field, telephone conferences and consultations	173
Official correspondence	<u>5</u>
Totals	238

Solid Waste

The objective of this program is to eliminate the transmission of disease organisms, which can result from the improper or inadequate handling and disposal of garbage and other solid wastes. This objective is being achieved by the enforcement of the Vermilion County Health Department's **Ordinance Governing Solid Waste Disposal**.

On June 1, 1993, the Vermilion County Health Department entered into an agreement with the Illinois Environmental Protection Agency to have the Vermilion County Health Department's Environmental Health staff conduct routine inspections of licensed sanitary landfills. This agreement also requires the Vermilion County Health Department staff to investigate all complaints dealing with illegal landfills, illegal dumping, and other violations of the Illinois Environmental Protection Act dealing with non-hazardous solid waste. Starting in 2006, the Vermilion County Health Department initially received grant funds from the Illinois Environmental Protection Agency (IL E.P.A.) to offset part of the cost of conducting this program.

Solid Waste Activities

	<u>2012</u>
Inspections of permitted and closed landfills	16

Totals	4,492

Nuisance Control

The goal of this program is to eliminate the transmission of disease and preserve the safety, comfort and enjoyment of life through the control of public health nuisance conditions. The objective of this program is being achieved by the enforcement of the Vermilion County Health Department's **Ordinance Governing Solid Waste Disposal**

and the **Nuisance Ordinance**. The Vermilion County Board did, on November 12, 2002, pass a nuisance ordinance. The ordinance allows the Environmental Health sanitarians to order corrections of nuisance conditions concerning surface water contamination, abandoned swimming pools and vermin infestations.

Nuisance Control Activities:

	<u>2012</u>
Field investigations	3
Office, field and telephone conferences and consultations	5

Totals	10

Lead Poisoning Prevention

The Lead Poisoning Prevention program's purpose is to reduce or eliminate the incidences of childhood lead poisoning and is funded by grants through the Centers for Disease Control and Prevention. The Vermilion County Health Department has been a delegate agency for the Illinois Department of Public Health for this purpose since 1993. As a delegate the Health Department has the authority to enforce the Illinois Lead Poisoning Prevention Act.

Staff members of the Health Department provide two services in this program, case management by a registered nurse and environmental inspections by licensed lead risk assessors. The responsibility of the case manager is to follow-up on cases of minors found to have elevated blood lead levels. Under the Lead Poisoning Prevention Act, "Children with confirmed venous elevated blood lead levels of 10 mcg/dL or higher are provided comprehensive case management. For children younger than 36 months of age at confirmed venous levels of 10 mcg/dL and above and children older than 36 months of age at levels of 15 mcg/dL and above, public health nurses conduct home visits to educate families on ways to lower the blood lead level, including proper nutrition, hygiene and housekeeping. Home visits include a visual assessment of the residence to include education on other hazards in the home that could result in negative health effects."

The department has two licensed lead risk assessors on staff. By referral, the risk assessors conduct an environmental inspection when confirmed blood lead levels fall within the cited levels. An environmental inspection of the child's primary residence and/or a supplementary address in which the child frequents must be inspected to identify immediate sources for lead poisoning.

The Act provides the assessor the authority to order the owner(s) of a residence that has been inspected to mitigate or abate hazards that were identified. Failure on the part of the owner to comply with a department's order to mitigate or abate can result in legal proceeding to be initiated with the Vermilion County State's Attorney Office. Educating the public on practices that prevent poisoning are practicing good hygiene, a healthy diet and good housekeeping practices.

Smoke Free Illinois Act (SFIA) Enforcement

Effective on January 1, 2008 the Smoke Free Illinois Act prohibited smoking in any indoor public area, place of employment or vehicle owned, leased or operated by the state or political subdivision of the state. The SFIA was passed by the General Assembly to protect Illinois residents and workers from the harmful and hazardous effects of secondhand smoke. Enforcement of the act was delegated to the Illinois Department of Public Health, local law enforcement agencies and state-certified local health departments

The Environmental Health Division has been enforcing the SFIA by sending violation warning letters to each food service establishment that is named via a complaint received by the SFIA Complaint Hotline system administered by the Illinois department of Public Health. When an individual establishment received three complaints an onsite inspection was conducted at the named establishment. If violations of the SFIA were observed a Notice to Appear in court was issued by our staff so that the State's Attorney Office could prosecute the cases. Fines ranging from \$250 to \$2,500 can be assessed against establishment owners that are determined to be guilty of violating the SFIA.

Brownfield Assessment Program

The goal of this program is to assess, safely clean up and sustainable reuse brownfields – vacant or underused properties that contain or potentially contain hazardous substances, pollutants or contaminants. Vermilion County was awarded a \$400,000 grant in 2010 from the United States Environmental Protection Agency to locate and assess brownfield sites.

The Vermilion County Health Department is utilizing the assessment grant to inventory and evaluate sites suspected to contain hazardous or petroleum contamination within the county and to determine the extent of the suspected contamination on those sites.

Environmental health staff coordinated preliminary assessments on seven sites, where property owners were interviewed about the history of the sites and detailed maps were made of the sites and photos were taken of the site conditions. More assessments, including the collection of soil or groundwater samples will take place at some of the sites in 2013. Plans to remove hazards from some of the sites and return them to beneficial use will also be completed in 2013, the final year of the grant.

General Environmental Health

The primary focus of this category is hazardous waste disposal problems and hazardous or toxic waste accidents. These activities require working closely with the Illinois Environmental Protection Agency and the Emergency Management Agency. This category includes the activities of the environmental health staff when they are working on bio-terrorism, pandemic influenza and all-hazards emergency planning and exercises. It also includes work done by the environmental health staff that does not readily fall into any of the other previously named program areas.

Educational Services for Students in Health Care Professions 2012

The Vermilion County Health Department continues to collaborate with the local schools of nursing, Lakeview College of Nursing, Danville Area Community College School of Nursing and the University of Illinois College of Nursing. In 2012, VCHD facilitated 89 clinical experiences for nursing students. In addition, nursing students worked on projects benefiting the health department and the community.

Projects included:

- Updating WIC Facebook page to include healthy recipes and photos
- Participation in adult flu clinics
- Development of a brochure that includes “little known places to walk” in Vermilion County. In an effort to combat obesity, two graduate nursing students were able to enlist 16 communities in the county to sign a Memorandum of Understanding to participate in identifying walking paths within each community.

VCHD values the opportunity to partner with our local schools of nursing and looks forward to continued collaborative efforts.

Emergency Planning and Preparedness

As part of the Public Health Emergency Preparedness Program, the Vermilion County Health Department has ongoing plans to prepare in the event of a public health emergency such as a pandemic or mass outbreak.

Vermilion County Health Department employees are required to complete NIMS Training (National Incident Management System). The employees' responsibility during a multi-jurisdiction, multi-agency, or multi-discipline incident determines the levels of training he or she will need. VCHD staff remains compliant for current NIMS training requirements.

In 2012, VCHD scored a 98 out of 100 points on the annual Local Technical Assistance Review (LTAR) for Strategic National Stockpile (SNS) Planning.
